▲ Avoid an excessive DOM size — 2,015 elements

A large DOM will increase memory usage, cause longer <u>style calculations</u>, and produce costly <u>layout reflows</u>. <u>Learn more</u>.

Consider using a "windowing" library like `react-window` to minimize the number of DOM nodes created if you are rendering many repeated elements on the page. <u>Learn more</u>. Also, minimize unecessary re-renders using shouldComponentUpdate, PureComponent, or React.memo and skip effects only until certain dependencies have changed if you are using the Effect hook to improve runtime performance.

Statistic	Element	Value
Total DOM Elements		2,015
Maximum DOM Depth		12
Maximum Child Elements	<div class="card-wrapper"></div>	100

Avoid chaining critical requests — 2 chains found

The Critical Request Chains below show you what resources are loaded with a high priority. Consider reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load. Learn more.

Maximum critical path latency: 1,800 ms

Initial Navigation

https://spacex-launch-programs-kushal.herokuapp.com

/style.css (spacex-launch-programs-kushal.herokuapp.com) - 270 ms, 1.05 KB $\,$

/main.js (spacex-launch-programs-kushal.herokuapp.com) - 330 ms, 55.26 KB

/service-worker.js (spacex-launch-programs-kushal.herokuapp.com)

/workbox-69b5a3b7.js (spacex-launch-programs-kushal.herokuapp.com) - 620 ms, 0 KB

Keep request counts low and transfer sizes small $\,-\,$ 40 requests $\,\cdot\,$ 743 KB

To set budgets for the quantity and size of page resources, add a budget.json file. Learn more.

Resource Type	Requests	Transfer Size
Total	40	742.9 KB
Other	34	636.4 KB
Script	1	55.3 KB
Image	3	43.6 KB
Document	1	6.6 KB
Stylesheet	1	1 KB
Media	0	0 KB
Font	0	0 KB

This is the element that was identified as the Largest Contentful Paint. Learn More

Element

h1

Avoid large layout shifts — No elements found

Largest Contentful Paint element — 1 element found

These DOM elements contribute most to the CLS of the page.

Passed audits (21)

Properly size images

Serve images that are appropriately-sized to save cellular data and improve load time. Learn more. Defer offscreen images

Consider lazy-loading offscreen and hidden images after all critical resources have finished loading to lower time to interactive. Learn more.

Minify CSS

If your build system minifies your CSS files automatically, ensure that you are deploying the production build of your application. You can check this with the React Developer Tools extension. Learn more.

Minify JavaScript

Minifying CSS files can reduce network payload sizes. Learn more.

Minifying JavaScript files can reduce payload sizes and script parse time. Learn more. If your build system minifies your JS files automatically, ensure that you are deploying the production build of your application. You can check this with the React Developer Tools extension. Learn more. Remove unused CSS Remove dead rules from stylesheets and defer the loading of CSS not used for above-the-fold content to reduce unnecessary bytes consumed by network activity. Learn more. Efficiently encode images Optimized images load faster and consume less cellular data. <u>Learn more</u> Serve images in next-gen formats Image formats like JPEG 2000, JPEG XR, and WebP often provide better compression than PNG or JPEG, which means faster downloads and less data consumption. Learn more. Enable text compression Text-based resources should be served with compression (gzip, deflate or brotli) to minimize total network bytes. Learn more. Preconnect to required origins Consider adding 'preconnect' or 'dns-prefetch' resource hints to establish early connections to important third-party origins. Learn more. Initial server response time was short — Root document took 430 ms Keep the server response time for the main document short because all other requests depend on it. Learn more. If you are server-side rendering any React components, consider using `renderToNodeStream()` or `renderToStaticNodeStream()` to allow the client to receive and hydrate different parts of the markup instead of all at once. Learn more. Avoid multiple page redirects Redirects introduce additional delays before the page can be loaded. Learn more If you are using React Router, minimize usage of the `<Redirect>` component for route navigations. Use video formats for animated content Large GIFs are inefficient for delivering animated content. Consider using MPEG4/WebM videos for animations and PNG/WebP for static images instead of GIF to save network bytes. Learn more Avoids enormous network payloads — Total size was 662 KB Large network payloads cost users real money and are highly correlated with long load times. Learn more. ✓ Show 3rd-party resources (1) URL Transfer Size 55.3 KB /main.js (spacex-launch-programs-kushal.herokuapp.com) 55.3 KB /main.js (spacex-launch-programs-kushal.herokuapp.com) 51 KB /assets/apple-icon-precomposed.png (spacex-launch-programs-kushal.herokuapp.com) 51 KB /assets/apple-icon.png (spacex-launch-programs-kushal.herokuapp.com) /assets/android-icon-192x192.png (spacex-launch-programs-kushal.herokuapp.com) 50.4 KB /assets/apple-icon-180x180.png (spacex-launch-programs-kushal.herokuapp.com) 44.2 KB /assets/apple-icon-152x152.png (spacex-launch-programs-kushal.herokuapp.com) /assets/ms-icon-150x150.png (spacex-launch-programs-kushal.herokuapp.com) 32.2 KB 31.7 KB ...86/cnu0pan8_o.png (res.cloudinary.com) 29.9 KB /assets/android-icon-144x144.png (spacex-launch-programs-kushal.herokuapp.com) Uses efficient cache policy on static assets — 0 resources found A long cache lifetime can speed up repeat visits to your page. Learn more. User Timing marks and measures Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. Learn more. Use the React DevTools Profiler, which makes use of the Profiler API, to measure the rendering performance of your components. Learn more. JavaScript execution time — 0.4 s ^ Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. Learn more. Show 3rd-party resources (0) **URL** Total CPU Script Evaluation Script Parse Time /main.js (spacex-launch-programs-kushal.herokuapp.com) 336 ms 317 ms 11 ms https://spacex-launch-programs-kushal.herokuapp.com 329 ms 29 ms 6 ms Unattributable 233 ms 4 ms 1 ms Minimizes main-thread work — 0.9 s Consider reducing the time spent parsing, compiling and executing JS. All text remains visible during webfont loads

Leverage the font-display CSS feature to ensure text is user-visible while webfonts are loading. Learn more.

Minimize third-party usage — Third-party code blocked the main thread for 0 ms

Third-party code can significantly impact load performance. Limit the number of redundant third-party providers and try to load third-party code after your page has primarily finished loading. <u>Learn more</u>.

^

Third-Party	Transfer Size	Main-Thread Blocking Time
Cloudinary	44 KB	0 ms
Uses passive listeners to improve s	scrolling performance	^
Consider marking your touch and v	wheel event listeners as `passive` to improve yo	our page's scroll performance. <u>Learn more</u> .
Avoids document.write()		^
For users on slow connections, ext seconds. <u>Learn more</u> .	ternal scripts dynamically injected via `documen	nt.write()` can delay page load by tens of

Accessibility

These checks highlight opportunities to improve the accessibility of your web app. Only a subset of accessibility issues can be automatically detected so manual testing is also encouraged.

Additional items to manually check (10) — These items address areas which an automated testing tool cannot cover. Learn ^ more in our guide on conducting an accessibility review.

	The page has a logical tab order	^
	Tabbing through the page follows the visual layout. Users cannot focus elements that are offscreen. <u>Learn more</u> .	
	Interactive controls are keyboard focusable	^
	Custom interactive controls are keyboard focusable and display a focus indicator. <u>Learn more</u> .	
	Interactive elements indicate their purpose and state	^
	Interactive elements, such as links and buttons, should indicate their state and be distinguishable from non-interactive elements. <u>Learn more</u> .	
	The user's focus is directed to new content added to the page	^
	If new content, such as a dialog, is added to the page, the user's focus is directed to it. <u>Learn more</u> .	
	User focus is not accidentally trapped in a region	^
	A user can tab into and out of any control or region without accidentally trapping their focus. <u>Learn more</u> .	
	Custom controls have associated labels	^
	Custom interactive controls have associated labels, provided by aria-label or aria-labelledby. <u>Learn more</u> .	
	Custom controls have ARIA roles	^
	Custom interactive controls have appropriate ARIA roles. <u>Learn more</u> .	
	Visual order on the page follows DOM order	^
	DOM order matches the visual order, improving navigation for assistive technology. <u>Learn more</u> .	
	Offscreen content is hidden from assistive technology	^
	Offscreen content is hidden with display: none or aria-hidden=true. Learn more.	
	HTML5 landmark elements are used to improve navigation	^
	Landmark elements (<main>, <nav>, etc.) are used to improve the keyboard navigation of the page for assistive technology Learn more.</nav></main>	
Pas	ssed audits (13)	^
	[aria-hidden="true"] is not present on the document <body></body>	^
	Assistive technologies, like screen readers, work inconsistently when `aria-hidden="true"` is set on the document ` <body>`. Learn more.</body>	
	Buttons have an accessible name	
		^
	When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. <u>Learn more</u> .

Screen readers have a specific way of announcing lists. Ensuring proper list structure aids screen reader output. <u>Learn</u> List items () are contained within or parent elements Screen readers require list items ('') to be contained within a parent '' or '' to be announced properly. Learn more. [user-scalable="no"] is not used in the <meta name="viewport"> element and the [maximum-scale] attribute is not less than 5. 🙏 Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. Learn more. Cells in a element that use the [headers] attribute refer to table cells within the same table. Screen readers have features to make navigating tables easier. Ensuring `` cells using the `[headers]` attribute only refer to other cells in the same table may improve the experience for screen reader users. Learn more. Not applicable (28) [accesskey] values are unique Access keys let users quickly focus a part of the page. For proper navigation, each access key must be unique. Learn more. [aria-*] attributes match their roles Each ARIA `role` supports a specific subset of `aria-*` attributes. Mismatching these invalidates the `aria-*` attributes. Learn more. [aria-hidden="true"] elements do not contain focusable descendents Focusable descendents within an `[aria-hidden="true"]` element prevent those interactive elements from being available to users of assistive technologies like screen readers. Learn more. ARIA input fields have accessible names When an input field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more. [role]s have all required [aria-*] attributes Some ARIA roles have required attributes that describe the state of the element to screen readers. Learn more. Elements with an ARIA [role] that require children to contain a specific [role] have all required children. Some ARIA parent roles must contain specific child roles to perform their intended accessibility functions. Learn more. [role]s are contained by their required parent element Some ARIA child roles must be contained by specific parent roles to properly perform their intended accessibility functions. Learn more. [role] values are valid ARIA roles must have valid values in order to perform their intended accessibility functions. Learn more. ARIA toggle fields have accessible names When a toggle field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more. [aria-*] attributes have valid values Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid values. Learn more. [aria-*] attributes are valid and not misspelled Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid names. Learn more. The page contains a heading, skip link, or landmark region Adding ways to bypass repetitive content lets keyboard users navigate the page more efficiently. Learn more. <dl>'s contain only properly-ordered <dt> and <dd> groups, <script>, <template> or <div> elements. When definition lists are not properly marked up, screen readers may produce confusing or inaccurate output. Learn more Definition list items are wrapped in <d1> elements Definition list items (`<dt>` and `<dd>`) must be wrapped in a parent `<dl>` element to ensure that screen readers can properly announce them. Learn more. [id] attributes on active, focusable elements are unique All focusable elements must have a unique 'id' to ensure that they're visible to assistive technologies. Learn more. ARIA IDs are unique The value of an ARIA ID must be unique to prevent other instances from being overlooked by assistive technologies. Learn more. No form fields have multiple labels Form fields with multiple labels can be confusingly announced by assistive technologies like screen readers which use either the first, the last, or all of the labels. Learn more. <frame> or <iframe> elements have a title Screen reader users rely on frame titles to describe the contents of frames. Learn more. <input type="image"> elements have [alt] text When an image is being used as an `<input>` button, providing alternative text can help screen reader users understand the purpose of the button. Learn more. Form elements have associated labels Labels ensure that form controls are announced properly by assistive technologies, like screen readers. Learn more. Links have a discernible name Link text (and alternate text for images, when used as links) that is discernible, unique, and focusable improves the navigation experience for screen reader users. Learn more. The document does not use <meta http-equiv="refresh"> Users do not expect a page to refresh automatically, and doing so will move focus back to the top of the page. This may create a frustrating or confusing experience. Learn more. <object> elements have [alt] text Screen readers cannot translate non-text content. Adding all text to `<object>` elements helps screen readers convey meaning to users. Learn more. No element has a [tabindex] value greater than 0

<video> elements contain a <track> element with [kind="captions"]

When a video provides a caption it is easier for deaf and hearing impaired users to access its information. <u>Learn more</u>.

<video> elements contain a <track> element with [kind="description"]

Audio descriptions provide relevant information for videos that dialogue cannot, such as facial expressions and scenes. <u>Learn more</u>.

Best Practices

Uses HTTPS All sites should be protected with HTTPS, even ones that don't handle sensitive data. This includes avoiding mixed co where some resources are loaded over HTTP despite the initial request being servedover HTTPS. HTTPS prevents	
intruders from tampering with or passively listening in on the communications between your app and your users, and is prerequisite for HTTP/2 and many new web platform APIs. <u>Learn more</u> .	
Links to cross-origin destinations are safe	
Add `rel="noopener"` or `rel="noreferrer"` to any external links to improve performance and prevent security vulnerabil Learn more .	lities.
Avoids requesting the geolocation permission on page load	
Users are mistrustful of or confused by sites that request their location without context. Consider tying the request to a action instead. <u>Learn more</u> .	user
Avoids requesting the notification permission on page load	
Users are mistrustful of or confused by sites that request to send notifications without context. Consider tying the request user gestures instead. Learn more.	est to
Avoids front-end JavaScript libraries with known security vulnerabilities	
Some third-party scripts may contain known security vulnerabilities that are easily identified and exploited by attackers Learn more.	> .
Allows users to paste into password fields	
Preventing password pasting undermines good security policy. <u>Learn more</u> .	
Displays images with correct aspect ratio	
Image display dimensions should match natural aspect ratio. <u>Learn more</u> .	
Displays images with appropriate size	
Image natural dimensions should be proportional to the display size and the pixel ratio to maximize image clarity. <u>Lear more.</u>	<u>'n</u>
Page has the HTML doctype	
Specifying a doctype prevents the browser from switching to quirks-mode. <u>Learn more</u> .	
Properly defines charset	
A character encoding declaration is required. It can be done with a <meta/> tag in the first 1024 bytes of the HTML or in Content-Type HTTP response header. Learn more.	n the
Avoids Application Cache	
Application Cache is deprecated. <u>Learn more</u> .	
Detected JavaScript libraries	
All front-end JavaScript libraries detected on the page. <u>Learn more</u> .	
Name Version	
React	
Avoids deprecated APIs	
Deprecated APIs will eventually be removed from the browser. <u>Learn more</u> .	
No browser errors logged to the console

	These chesic validate the deposit of a Progressive Web Prep.	
	Fast and reliable	
	Page load is fast enough on mobile networks	,
	A fast page load over a cellular network ensures a good mobile user experience. <u>Learn more</u> .	
	Current page does not respond with a 200 when offline	,
	If you're building a Progressive Web App, consider using a service worker so that your app can work offline. <u>Learn more</u> .	
	start_url does not respond with a 200 when offline	
	Timed out waiting for start_url (https://spacex-launch-programs-kushal.herokuapp.com/) to respond.	-
	A service worker enables your web app to be reliable in unpredictable network conditions. <u>Learn more</u> .	
	Installable	
	Uses HTTPS	,
	All sites should be protected with HTTPS, even ones that don't handle sensitive data. This includes avoiding <u>mixed content</u> , where some resources are loaded over HTTP despite the initial request being servedover HTTPS. HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. <u>Learn more</u> .	
	Registers a service worker that controls page and start_url	
	The service worker is the technology that enables your app to use many Progressive Web App features, such as offline, add to homescreen, and push notifications. <u>Learn more</u> .	I
	Web app manifest does not meet the installability requirements Failures: Manifest does not have `short_name`.	
	Browsers can proactively prompt users to add your app to their homescreen, which can lead to higher engagement. <u>Learn</u> <u>more</u> .	
	PWA Optimized	
k	Does not redirect HTTP traffic to HTTPS	

If you've already set up HTTPS, make sure that you redirect all HTTP traffic to HTTPS in order to enable secure web features for all your users. Learn more. ▲ Is not configured for a custom splash screen Failures: Manifest does not have a PNG icon of at least 512px. A themed splash screen ensures a high-quality experience when users launch your app from their homescreens. <u>Learn</u> Sets a theme color for the address bar. The browser address bar can be themed to match your site. Learn more Content is sized correctly for the viewport If the width of your app's content doesn't match the width of the viewport, your app might not be optimized for mobile screens. Learn more. Has a <meta name="viewport"> tag with width or initial-scale Add a `<meta name="viewport">` tag to optimize your app for mobile screens. Learn more. Contains some content when JavaScript is not available Your app should display some content when JavaScript is disabled, even if it's just a warning to the user that JavaScript is required to use the app. Learn more. Provides a valid apple-touch-icon For ideal appearance on iOS when users add a progressive web app to the home screen, define an 'apple-touch-icon'. It must point to a non-transparent 192px (or 180px) square PNG. Learn More. ▲ Manifest doesn't have a maskable icon A maskable icon ensures that the image fills the entire shape without being letterboxed when installing the app on a device. Learn more. Additional items to manually check (3) — These checks are required by the baseline PWA Checklist but are not automatically checked by Lighthouse. They do not affect your score but it's important that you verify them manually. Site works cross-browser To reach the most number of users, sites should work across every major browser. Learn more. Page transitions don't feel like they block on the network Transitions should feel snappy as you tap around, even on a slow network. This experience is key to a user's perception of performance. Learn more. Each page has a URL Ensure individual pages are deep linkable via URL and that URLs are unique for the purpose of shareability on social media.
